

**Subject:** Adequate Clearance

**Recap:** Stopping distances. Experience of drivers following very close & harsh braking.

**Objective:**

- What* Consider leaving adequate clearance while driving.
- How* Discuss the main points of leaving adequate clearance in various driving situations followed by on road practice.
- By the end* Be able to keep a safe space all round your vehicle when driving.

**Main Points:**

**Why?** Allowing enough space all round vehicle creates a safety bubble which gives us time to *Look*, *Think* and *Act*.

**In Front** Separation Distance - Ideally, overall stopping distance for speed (practical?)  
1 metre for every mph of speed - how to judge - 2 second rule  
(At least double the distance in poor weather conditions - possibly more)  
Allow space to see around large vehicles and, in queues, room to manoeuvre.

**Behind** Tailgaters - Slow down gradually to give yourself more space in front as the following driver will need more warning (let them pass if safe).

**To the Sides** Avoid driving along-side other drivers - escape route?  
Avoid driving in someone else's blind spots (be aware of people in yours)

Clearance that we should allow when passing other road users:

**Parked cars** Approximately a doors width / 1metre - be aware of doors opening, pedestrians stepping out, drivers in parked cars, cars pulling off suddenly.

**Cyclists** Treat them as if they were a small car - allow as much room (be prepared for them to swerve/wobble and make unexpected sideways movements).

**Horses** Allow even more room - as much as is practical. Pass very slowly and avoid revving the engine or sounding the horn (be aware of horses behaviour).

**Remember** Not always enough space to allow ideal clearance - Less Space, Less Speed
